

## Can we help increase oil recovery in the Middle East?

**Yes, while reducing  
greenhouse emissions.**

Nejjib Zaafrani:  
Chairman and Managing Director, Shell Abu Dhabi

The world is facing two critical challenges: the sustainability of traditional fossil fuel production and the environmental effect of CO<sub>2</sub> 'greenhouse gas' emissions. Nejjib Zaafrani and his colleagues are focusing on turning these challenges into opportunities, thanks to Shell capabilities, technologies and partnerships, all enabled by a strategic vision and a novel solution. By capturing CO<sub>2</sub> from industrial sources, compressing it and then 'injecting' it into the oil fields, Enhanced Oil Recovery (EOR) ensures that the potential additional oil recovery in the Middle East will be the equivalent to several years of current global oil demand. To find out more about Nejjib and Shell's CO<sub>2</sub> vision, visit [shell.com/nejjib](https://shell.com/nejjib)
